Addenda to “New taxa of blues from Tian-Shan”

(Lepidoptera, Lycaenidae)

by

SERGEI CHURKIN & ALEXANDER ZHDANKO

received 17.IX.2009

The article “New taxa of blues from Tian-Shan (Lepidoptera, Lycaenidae)” was published in Atalanta **39** (1-4): 297-309, colour plates 2-3. Unfortunately, a technical mistake was made by the editor: the description of “*Agrodiaetus phyllides urumbash* subspec. nov.” (page 297) lost part of the text with all paratypes of this taxon. Only the holotype ♂ is mentioned, although it is clear after the description, that the authors had at their disposal a long series of the new subspecies. Moreover, the ♀ paratype is figured in the colour plate together with the holotype ♂.

We are publishing here the missing part of the text:

Paratypes: 1 ♂, 2 ♀, same data; 1 ♂, 1 ♀, same loc., 1300 m, 14.VI.2006, S. CHURKIN leg.; 1 ♂, Kyrgyzstan, Tian-Shan, Kazarman vic., 20.V.2005; 1 ♂, 2 ♀, Kyrgyzstan, Tian-Shan, Moldo-Too Range, 50 km NEE Kazarman, 2000-2100 m, 11-13.06.2006, S. CHURKIN leg., 32 ♂♂, 9 ♀♀, Kyrgyzstan, Tian-Shan, Fergansky Mts. (eastern edges), Urum-Bash R., 1600 m, 15.VI.2006, S. CHURKIN, V. PLETNEV & S. SALUK leg.

As it was marked in the original description, the holotype is deposited in the Darwin State University (Moscow) while the paratypes are in the authors’ collections.
